Tracking Metrics

Track Managed Challenge metrics based on PAT validity

Challenge count: how many client requests are challenged?

Challenge solve rate: what percentage of challenges complete successfully?

Challenge solve time: how long does it take the platform to make a decision about a request?

Metrics for PAT vs Non-PAT Requests

Metric	Approximate % difference
Challenge count	92% ⬇
Challenge solve rate	42%
Challenge solve time	48%

Reduction in overall number of challenges

Note: As of 2/13/2023, over the last 7 days

Metrics for PAT vs Non-PAT Requests

Metric	Approximate % difference
Challenge count	92%
Challenge solve rate	⬆42%
Challenge solve time	48%

Increase in likelihood of challenges being solved

Note: As of 2/13/2023, over the last 7 days

Metrics for PAT vs Non-PAT Requests

Metric	Approximate % difference
Challenge count	92%
Challenge solve rate	42%
Challenge solve time	48% ⬇

Reduction in overall user time spent solving challenges

Note: As of 2/13/2023, over the last 7 days

Early Takeaways

PATs are so far a useful signal for human (non-automated) traffic amongst current supported clients

This may change as a function of attestation quality

PATs are app-friendly as well as web (browser) friendly

PATs do not directly target AFCG use cases, but do narrow the attack surface in considering defenses against these attacks
